DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 40, 41 and 43-63 are rejected under 35 U.S.C. 103(a) as being unpatentable over New Glarus Brewing Company Apple Ale Beer (label)("New Glarus") or Cock's Fine Brews (<http://www.notchturner.com/cock/frutopen.htm>)("Cock") in light of Ashurst (Production and Packaging of Non-Carbonated Fruit Juices and Fruit Beverages (pages 174-6)) in view of Line *et al.* (U.S. Pat. No. 4,355,110)("Line") and in further view of applicants' admissions (page 5).

New Glarus or Cock in light of Ashurst in view of Line teach that cited in the last office action, but do not specifically teach the notoriously well known and inherent method steps for producing pils-type beer, i.e., cooking, boiling and fermenting. Applicants admit, on page 5 of their specification, that these steps are "commonly used in the brewing industry." The claim language itself admits that these steps are used to make a "pils-type beer." It would have been obvious to those of ordinary skill in the art to use the notoriously well known beer making steps of cooking, boiling and fermenting prior art works as they are commonly used in the brewing arts.

Claims 40 and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over the well known mixed drink "Snakebite" in view of Line and in further view of applicants' admissions.

The process by which Snakebite is made has been previously stated. It is the mixture of cider and lager. Pils is a lager. Again, applicants admit that the newly claimed process steps are "commonly used in the brewing industry." It would have been obvious to those of ordinary skill in the art to use the notoriously well known lager beer making steps of cooking, boiling and fermenting prior art worts as they are commonly used in the brewing arts.

With regard to using a centrifuge, it would have been obvious those of ordinary skill in the art to clarify the inherently cloudy beverage.

Response to Arguments

Applicants' arguments filed 10/02/03 have been fully considered but they are not persuasive. Applicants argue that the claim limitations of the dependent claims have not been addressed. Applicants' attention is directed to previous Office actions, where they were initially discussed. Applicants also argue that no scientific evidence has been supplied to show that the claimed haze would be obtained. The disclosed prior art teaches the process steps claimed and therefore it is inherent that the haze would be obtained. If this is not the case, it is possible that the claims are not enabled.
